

The **CyclePump** is the world's finest motorcycle tire inflator. Period. It's the tire inflator of choice on most motorcycle expeditions. It's used by several major international tour companies. Helge Pedersen, photographer and motorcycle adventurer carries one. Ron Ayres, author and world traveler carries one. Paul Taylor won the Iron Butt Rally using one. Chris & Erin Ratay circled the globe and set a Guinness World Record using one. They all carry the **CyclePump** for one simple but very compelling reason - IT WORKS !

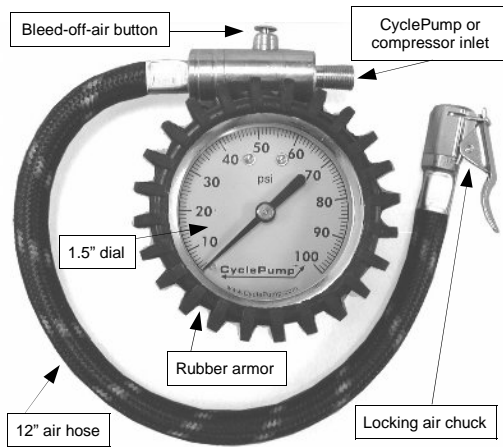

I'm David Petersen, owner of BestRest Products and an avid motorcycle rider. Several years ago I developed the **CyclePump** in response to my need for a quick and easy method of emergency tire inflation. I tried other inflation tools including hand pumps, plastic cased inflators, and CO<sup>2</sup>, but found them sadly lacking. I finally decided to manufacture my own inflator that was specially engineered for the rigors of motorcycling. I wanted a unit that was simple, durable, reliable, and capable of the performing when things got tough. I carefully selected the finest materials and the best components. The result: **CyclePump**.

Our powerful and compact **CyclePump** is THE solution to tire inflation when you're miles away from the nearest air compressor. Using your bike's 12-volt system as a power supply, you can easily "air-up" a low tire after a low pressure ride in the dirt, or quickly fill a flat tire after making roadside repairs. Inflation times vary depending on tire size and other factors, but on average you'll be able to fill a front tire in about 2-3 minutes and a rear tire in about 4-5 minutes. Whatever inflation scenario you encounter, you'll soon be on your way, with FULL TIRE PRESSURE.

The **CyclePump** has a 12" air hose with a brass air chuck that clips onto the tire's valve stem. The unit is rated to over 200 PSI, yet measures less than 2"x4"x6" and weighs only 29 ounces. The heavy duty motor, self-lubricating reduction gears, and all-metal piston compressor assembly are protected by an attractive and rugged aluminum case. There's an 8-foot power cord that fits BMW, cigarette lighter, and 2-prong SAE plugs. A bright red Cordura storage pouch is included with each unit. The Standard **CyclePump** has all of the above features and power options. The Deluxe **CyclePump** also comes with a set of alligator clips for a quick connection to your battery. Standard CyclePump \$80. Deluxe CyclePump \$90.

After our success with the **CyclePump**, I began looking at another problem - the air gauge. I wanted a unit rugged enough for motorcycle applications, compact, affordable, accurate, and reliable. It had to be able to inflate or deflate a tire, so it had to connect in series with a compressor or the **CyclePump**.

Our **EZAir Tire Gauge** is the answer. It works great by itself, but it also works as an in-line gauge. This unit has several features found nowhere else... On top of the gauge there's a bleed valve so you can easily drop pressure, and a valve stem on the side so you can add air without removing the gauge. The 1-1/2" dial is rubber armored. The fittings are solid brass for durability. The internal movement is unaffected by temperature, humidity, or altitude. The 12" flexible hose easily fits between spokes, rims, and brake discs. The locking air chuck clamps firmly onto the valve stem so it won't leak air as you fill the tire. The gauge easily fits in the palm of your hand. A vinyl storage pouch is included with each gauge.

As shown below right, you can connect the **EZAir** to the tire, connect the **CyclePump** (or other compressor) to the gauge, then monitor pressure as the tire inflates. Tire inflation just doesn't get any easier than this! The EZAir Tire Gauge has a limited lifetime warrantee. It's available from BestRest Products for only \$25 + shipping.

In addition to our CyclePump and EZAir Tire Gauge, BestRest also manufactures a line of accessories specially designed for BMW motorcycles. Our focus is the dual purpose R1100GS, R1150GS and the new R1200GS, but we also make accessories for other BMW models. Check our websites for more information:
